Genesis Freeze Dryer

Unmatched for capabilities and price, Genesis allows you to select the latest in data monitoring and automation. This makes it ideal for scale-up from research to pilot scale production.

An expanded range of shelf arrangements and condenser capacities lets you configure to your exact load requirements.

Our Wizard controller gives you LCD display of precise data, generated from product- or shelf-driven freeze-drying cycles. Full recipe management allows for a precisely controlled process.

Ultra Freeze Dryer

The Ultra Series Freeze Dryers are customized for your exact processing needs. They offer expanded capabilities with over 50 user-friendly configurations to choose from.

Dramatically increased shelf area and clearance; new latching capability for larger vials; and advanced, easy-to-use processing control systems and internal condenser are just some of the newest innovations to this freeze dryer series.

VirTual Freeze Dryer

The VirTual Freeze Dryer is ideal for product development and small production requirements where a large vapor load is delivered quickly to the condenser. The new series is available with our water cooled Super EL refrigeration system capable of -70°C shelf temperature and -90°C condenser temperature.

Complete process automation and validation documentation available.

The diverse product lines of VirTis are used in the pharmaceutical, life science, biomedical, environmental and industrial markets. Along with research size, pilot scale, and industrial freeze dryers, we manufacture research equipment such as mechanical homogenizers, ultrasonic cell disrupters, and fermenters. This extensive line of equipment offers our customers complete flexibility for their processing needs.

As an ISO 9001 registered manufacturer, our search for technical excellence includes an unwavering commitment to quality, value and service -before, during and after installation. For more information about our freeze dryer line **Contact Your Representative Today!**

Removable Bottom - The bottom of these trays is removed to facilitate optimal contact between the vials and the shelves.

Poly Bottom - These trays have a polyurethane bottom membrane which promotes the most efficient heat transfer from shelf to bulk product.

Filter Seal - For use in bulk applications where the dried product tends to be easily disturbed and dispersed throughout the product chamber. Paper filters collect these particles, vastly improving product retention.

New Thermo Guard - The new Thermo Guard trays have a baffle design that is designed to reduce radiant heat transfer to the vials from the lucite product doors on the Genesis, Ultra or VirTual.

Standard Bulk - These trays are constructed of 316 stainless steel for bulk applications.
